

Product Overview

European Refinery Intelligence Service

The most extensive and up-to-date look at the daily status of refinery operations in Europe

Features:

- Daily PDF delivered via email at 13:00 GMT, with detailed information and commentary on the status of key units at monitored refineries across Europe.
- Insight into production organized by product class: primary processing, light products, middle distillates and heavy products.
- Data available on WoodMac's Oil Portal includes detailed information on the status of refineries, including real-time images and unit status information by refinery and by product type
- Daily online/offline status and unit capacity data is available for all European refinery units via WoodMac's API Portal.

As European refiners navigate ever-changing markets, the operational health of refining units becomes increasingly important. A brief upset at a distillation unit or a hydrocracker in the ARA region can send refined product futures prices sharply higher. The immediacy of the effect on market prices means that time is of the essence when it comes to disruptions, shutdowns and startups of refinery units.

Wood Mackenzie's Refinery Intelligence service combines observations obtained from infrared cameras with in-house analytical and technological expertise to provide an unrivalled view into operations at European refineries.

WoodMac monitors 65% of the refineries west of the Former Soviet Union including all major refineries in the Amsterdam-Rotterdam-Antwerp (ARA) region, the UK and France.

Infrared images provide unit status insights not available to the naked eye

Benefits:

- Assess real-time market implications on crude oil demand and supply of refined products in any given region when you have immediate notice of outages of key processing units at refineries.
- Achieve a comprehensive view of refinery utilization by product class across Europe
- Understand market conditions by reading daily commentary featuring unique insight into the crude and refining markets based on WoodMac's institutional knowledge of refinery operations

Designed for you

Traders

Time is of the essence in a fast-moving, sensitive market. Optimise your trading strategies with access to our real-time information on crude oil supply and demand and immediate notice of outages of key processing units.

Analysts

Easily identify crude demand and refined products supply to inform arbitrage models, regional supply/demand balances and trade recommendations.
