

# Ethylene Oxide, EODs & Glycols Service

**Gain insight into propylene price and global markets** with cutting-edge data on commercial trends, supply/demand and capacity

Global long-term forecast to **2050**

Bi-annual updates

Supply, Demand, Capacity and Projects, Long-Term Pricing Outlook

Consistent, granular, application focused demand taxonomy: with new, integrated Materials Applications Platform

Strategic, detailed, long-term capacity, production, consumption and trade data with price forecasting

In-depth commercial analysis by region and country for ethylene, EO, MEG, higher glycols, glycol ethers, ethanolamines, polyester fibres and PET resin

Interpretive view of projects, producer capacity, turnaround and shutdown data, supply/demand dynamics, trade data, and asset utilisation

## Use it to:

Identify investment opportunities and manage risk in the commodity chemical markets

Identify inter-regional trade patterns and arbitrage opportunities

Recognise pricing demand patterns for these chemistries

Understand the supply/demand outlook globally and on a granular regional level

Assess the impacts of plant outages, supply restrictions, technology changes and other factors

Examine the outlook on production costs and profitability for ethylene oxide, glycols and key feedstocks
